

# Custom software. Clearer handoffs.

Practical software, automation and web systems for owner-led service businesses.

An inquiry arrives. A visit needs scheduling. An agreement is signed. We help your team know what happens next.

## Systems Review

Understand one workflow or application. Get evidence, priorities, and a practical next step.

## Connected Website

Give visitors a useful starting point and connect inquiries to the people and tools handling them.

## Workflow Tools & Automation

Build a focused tool or integration, with clear status, exception handling, and human review.

## System Care

Keep a known system maintained through scheduled work, clear capacity, and a visible record of changes.

## Work you can see

Lead records with follow-up dates and estimate visits. Owner-editable website content. An internal agreement workflow that prepares one draft invoice for review after signing.

Examples are supported by source review and synthetic demonstrations. No revenue or time-saving claims are implied.

**Tell me what keeps getting stuck.**
